

BOUBYAN ISLAND MASTER PLAN

Client: Kuwait Municipality, MEGA Projects

Malone Given Parsons Ltd. worked with a group of consultants to create a detailed Master Plan for an environmentally significant area called Boubyan Island. The project included the integration of environmental, engineering and planning data. Detailed environmental, land-use, and economic information was created to assist in the development of the Boubyan master plan.

The project team also designed a development viewing tool that utilized GIS information to help explain the tasks for preparing and dredging the development area, infrastructure placement, and the proposed development timing and cost estimations.
