

GIS IMPLEMENTATION

Client: Municipality of Clarington

Malone Given Parsons Ltd. has undertaken the development of a phased GIS implementation strategy which provided linkages to a wide range of existing municipal, commercial and operational systems.

The issues in Clarington include incompatible keys and indexes into data, different computer formats and data structure and redundant views of data between different organizations. Malone Given Parsons Ltd. has effective methodologies to rationalize the existing data and its utility for linkage to the GIS. The result is a cost-effective design that maintains the business functions in the municipality and supports billing and ongoing operations that support the clients requirements.
